

Carpet Protection Film Important Information & Precautions Sheet

Self-adhesive protection films are designed for temporary protection on surfaces against dirt, scratches and tool marks. They are not designed for protection against corrosion, humidity or chemicals. Their applications are very diverse and the conditions of use can vary from one enterprise to another. For this reason it is essential that the client tests the product to determine the suitability of any film for the intended application.

The evaluation test must take into account the type of material on which the product is used, the surface finish, the temperature and processing constraints, and the time and condition of exterior exposure.

The manufacturer or seller cannot be held responsible for misuse of the product, nor for consequences resulting from surface properties and conditions, or for any problem or issue arising from any use of the film.

WARNING

Always check the label inside of the roll for correct product before use (Carpet Protection Film).

- Recommended for use on synthetic, acrylic or nylon carpet only, not to be used on wool carpets. Do not use carpet film on any carpet that has had any treatments done.
